If you introduce the code for a model that is close but it is not accurate, some functions can work while others may fail. You should ensure that the configuration of your device is the same frequency as your remote sends. Components components operate on infrared (IR) or radio frequency (RF).TroubleshootingFor many remote users, two main problems seem to arise: the remote not working correctly and random devices turning on seemingly by themselves. If you¢ÃÂÂre working with an IR remote, it requires a clear line of sight to communicate with your television. If your remote isn¢ÃÂÂt working, the odds are pretty good that you need to keep the remote pointed at the TV until it receives all the commands.If you notice random devices turning on or off after pressing a command into your remote, then you may have what Yahoo! calls gremlins. This is a conflict caused by HDMI CEC. Turn off HDMI CEC in your television and home theater settings and you should be good to go.
